DETAILED ACTION

Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

- I. Claims 1-11 and 18, drawn to an apparatus and method for generating a data stream, which comprises two reference points, of code words of variable lengths, classified in class 348, subclass 384.
- II. Claims 12-17 and 19, drawn to an apparatus and method for reading a data stream, which comprises two reference points, from which at least a part of a code word is written in a first and a second direction of writing, respectively, classified in class 386, subclass 109.

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, subcombination I has separate utility such as coding data and write data to memory for storage, while the subcombination II has a separate utility such as retrieving coded data from memory for presentation or transmission. See MPEP § 806.05(d).

Because these inventions are independent or distinct for the reasons given above and the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.
